

## Introducing a new accessory for the ProVari and ProVari Mini.

### The Pass-Thru Power Adapter

The Pass-Thru allows you to power the ProVari or ProVari Mini while in the car or at home (with the optional wall plug). By removing the battery and inserting this special power pack, it provides all-day power to the ProVari and ProVari Mini.

The standard kit includes the Pass-Thru, 12V cigarette lighter plug and a small adapter that snaps onto the Pass-Thru to adapt it from a Mini to a Regular. This adapter can be easily removed at any time to change it back to a Mini Pass-Thru.

The following optional accessories are available for this unit:

**ProVari Pass-Thru Wall Plug** – This plugs into a standard 110V outlet. This will power the ProVari Pass-Thru anywhere you feel like plugging it in. This power supply is also compatible with 240V and can be used with a plug adapter for international customers.

**Wall Plug Power Splitter** – This plugs into the ProVari Pass-Thru wall plug or car adapter and allows two ProVari's to be powered off the same wall plug. (Requires an Extension Cable.)

**ProVari Pass-Thru Extension Cable** – This cable can be used to either extend the length of the standard power cable, or it can be used with the Power Splitter to power two ProVari Pass-Thru units at the same time.

**90° Elbow Connector** – For those who want to direct the cable off to the side, this adapter connects to the end of the ProVari Pass-Thru and angles the connector at a 90°.

**12V Replacement Car Adapter** – If you need a spare car adapter or replacement.
